MUHAMMAD ALIF DANIEL BIN MOHD HAIRUL HEZZELIN

Fullstack Web Developer

alifdaniel.workspace@gmail.com | github.com/THEALIFHAKER1/ | alifdaniel.dpdns.org

Experienced web developer passionate about staying ahead in technology. Committed to excellence, self motivated, and eager to learn. Dedicated to delivering high-quality results and continuously improving both code and craft.

Work Experience

FULLSTACK WEB DEV - Lapasar Sdn Bhd [WFH] – Malaysia — Jun 2024 – Mar 2026

Fulltime

- Migrated legacy CodeIgniter system to React (Vite), improving load time by 3x and reducing development complexity
- Reverse-engineered undocumented systems to migrate business-critical features without regression
- Refactored legacy modules to reduce technical debt and improve system performance
- Implemented UI/UX improvements that enhanced user experience across Marketplace and Dashboard

FRONTEND WEB DEV - AllMeans Pte. Ltd. [WFH] – Singapore — Aug 2023 – Feb 2024

Intern

- Developed a full Admin Management System using React and Material UI
- Translated Figma designs into reusable and scalable UI components
- Integrated APIs with backend services to ensure reliable data flow
- Improved UI consistency and development efficiency through component reuse

Education

Harvard University (CS50x: Introduction to Computer Science) – Online — 2024 - 2026

- Completed Harvard's CS50x course covering foundational topics in computer science, including algorithms, data structures, memory, abstraction, web development, and programming in C, Python, SQL, HTML, CSS, and JavaScript.
- Gained hands-on experience through problem sets and final projects focusing on computational thinking and software engineering fundamentals.

Industrial Training Institute, Kuala Langat – Malaysia — 2022 - 2024

Diploma in Web Development, GPA: 3.71/4.00

- WorldSkills Malaysia Belia (WSMB) — 2022 & 2023
- Malaysia Tech Lympics (TOP 10) - 2023

SMK Banting (SPM) – Malaysia — 2016 - 2022

- Computer science - A
- Science - A

Skill & Tech Stack

- **Frontend** : React, Next.js, TypeScript, HTMX, TailwindCSS, Shadcn/UI, Material UI
- **Backend** : Nestjs. PHP, Laravel
- **Database** : MySQL, PostgreSQL
- **Tools** : Postman, Figma, Vercel, Neon, Sanity CMS
- **Version Control** : Git, Github, Azure, Gitlab
- **Other** : REST APIs, UI/UX implementation, system migration
- **OS, Productivity** : Windows, macOS, Linux, Office 365

Additional Experience

Homelab Infrastructure (Self-Hosted Environment)

- Built and managed a personal homelab environment for testing and deploying web applications
- Configured local servers and services to simulate production-like environments such as nginx, cloudflare, docker
- Practiced system troubleshooting, networking, and deployment workflows

Project

METEO: meteo.alifdaniel.dpdns.org

Tech: React, TypeScript, Tailwind CSS, REST API, Vercel

- Developed a responsive weather application for searching cities and viewing current conditions and forecast data.
- Consumed third-party weather APIs and handled async data fetching, loading states, and error states in the UI.
- Built reusable frontend components to improve consistency, scalability, and development efficiency.
- Deployed the project to Vercel with a production-ready frontend workflow.

GASAK ESPORT MANAGEMENT : PRIVATE

Tech: React, TypeScript, Tailwind CSS, Sanity, Vercel, Neon

- Developed a web platform for managing esports team information, including player profiles, team structure, and organizational content
- Designed the application with scalability and maintainability in mind for future feature expansion
- Optimized frontend performance and responsiveness for both desktop and mobile users
- Deployed the project to Vercel with a production-ready frontend workflow.

WASTE GRAB : IN DEVELOPMENT

Tech: React, TypeScript, Tailwind CSS, Sanity, Vercel, Neon

- Designed and developed a “Grab for recycling” platform enabling users to request waste pickup and receive compensation based on recyclable material value
- Built a request workflow system for scheduling pickups, managing user data, and handling service flow between users and collectors
- Integrated APIs for dynamic pricing calculations and real-time request handling
- Structured the system with scalability in mind, supporting future features such as real-time tracking, role-based users, and payment integration
- Focused on building a clean, mobile-friendly UI inspired by modern on-demand service applications
