

MUHAMMAD ALIF DANIEL

BIN MOHD HAIRUL HEZZELIN

Full-Stack Web Developer

alifdaniel.workspace@gmail.com | github.com/ALXP-DANIEL | alifdaniel.dpdns.org

Self-motivated Full-Stack Web Developer with experience building role-based web applications using Angular, React, Node.js, Express, Laravel, Prisma, and MySQL. Passionate about clean code, practical problem-solving, and continuously improving software quality, user experience, and development workflow.

Work Experience

FULLSTACK WEB DEV - Lapasar Sdn Bhd [WFH] – Malaysia Jun 2024 – Mar 2026

Fulltime

- Migrated a legacy CodeIgniter system to React with Vite, improving frontend maintainability and application performance.
- Reverse-engineered undocumented legacy systems to migrate business-critical features without causing regression.
- Refactored legacy modules to reduce technical debt, simplify code complexity, and improve system stability.
- Implemented UI/UX improvements across Marketplace and Dashboard modules, enhancing user experience and reducing friction.
- Improved feature delivery by modernizing legacy workflows and aligning the frontend with current development standards.

FRONTEND WEB DEV - AllMeans Pte. Ltd. [WFH] – Singapore Aug 2023 – Feb 2024

Intern

- Developed a full Admin Management System using React and Material UI
- Translated Figma designs into reusable and scalable UI components
- Integrated APIs with backend services to ensure reliable data flow
- Improved UI consistency and development efficiency through component reuse

Additional Experience

Homelab Infrastructure (Self-Hosted Environment)

- Built and managed a self-hosted homelab to run private services, test deployments, and practice production-like infrastructure.
- Hosted personal services including Immich for family photo backup, Home Assistant for smart home automation, VPN access, DNS filtering, and private media management.
- Configured Docker-based services, reverse proxy, DNS, networking, and storage to improve privacy, reduce reliance on third-party cloud platforms, and gain hands-on DevOps experience.
- Used the environment to test web application deployment, troubleshooting, monitoring, backups, and service recovery workflows.

Project

GASAK ESPORT MANAGEMENT : PRIVATE – Fullstack Web Dev Jan 2025 – May 2025

Tech: React, TypeScript, Tailwind CSS, Sanity, Vercel, Neon

- Developed a web platform for esports teams to manage player profiles, team structure, and organizational content in one centralized system.
- Built a content management workflow using Sanity, allowing team information to be updated more easily without changing code.
- Designed the platform with scalable structure to support future features such as player stats, team announcements, and event updates.
- Optimized the frontend for desktop and mobile users, improving accessibility for players, team members, and visitors.
- Deployed the platform to Vercel, making the project easier to maintain, preview, and update.

Tech: Angular 21, TypeScript, Tailwind CSS, Zard UI, Node.js, Express.js, Prisma 7, MySQL/MariaDB, Roboflow API, Supabase Storage, MapLibre GL, OSRM Routing API, Google Maps Places API, Docker, GitHub Actions, Railway, GHCR, Graphify

- Built a full-stack recycling pickup and rewards platform for customers, collectors, and admins using Angular 21, Express.js, Prisma, and MySQL/MariaDB.
- Implemented customer pickup requests with image upload, saved addresses, pickup history, and lifecycle tracking to simplify recycling pickup submission.
- Integrated Roboflow AI analysis to suggest waste category, estimated weight, and reward points, helping customers submit more accurate pickup requests.
- Developed collector workflows for assigned pickups, route previews, status updates, and actual weight verification to support field collection operations.
- Created admin modules for users, collectors, pickups, waste categories, vouchers, notifications, and reward activity to centralize platform management.
- Prepared testing and deployment workflow using Playwright, Vitest, API testing, ESLint, Docker, GitHub Actions, GHCR, and Railway.

Tech: Next.js 16, React 19, TypeScript, Tailwind CSS 4, Base UI, Motion, qr-code-styling, React Hook Form, Zod, GraphQL, Vitest, Playwright, Biome, Vercel

- Developed a modern single-page QR code generator that allows users to create, customize, preview, and export QR codes through an interactive glass-style QR studio.
- Built support for multiple QR content types including URL, text, email, phone, and Wi-Fi, with validation and payload generation handled through shared application logic.
- Implemented live QR preview with customizable foreground color, QR background color, card color, dot style, corner style, padding, logo upload, error correction, and backdrop patterns.
- Created PNG and SVG export functionality with framed output, custom QR styling, backdrop rendering, and multiple export layouts including square, portrait, and desktop formats.
- Developed a GraphQL endpoint for QR payload preview and generation, reusing the same validation and payload builder logic used by the frontend.
- Improved project maintainability using Vitest, Playwright, Biome, and type checking to support reliable testing, formatting, and frontend behavior.

Tech: React, TypeScript, Tailwind CSS, REST API, Vercel

- Developed a responsive weather application that helps users quickly search cities and view current weather conditions and forecasts in one interface.
- Integrated third-party weather APIs to provide city-based weather data with clear loading, success, and error states.
- Built reusable frontend components to improve UI consistency, code maintainability, and future feature development.
- Deployed the application to Vercel, making the project publicly accessible as a live frontend portfolio project.

Skill & Tech Stack

- **Frontend** : Angular, React, Next.js, TypeScript, JavaScript, Tailwind CSS, Zard UI, ShadCN UI, Material UI, HTMX
- **Full-Stack / Backend** : Laravel, PHP, Node.js, Express.js, NestJS, Prisma, REST APIs, Cookie based Authentication
- **Database** : MySQL, MariaDB, PostgreSQL, Neon
- **AI / Media / Storage** : Roboflow API, Multer, Sharp, Supabase Storage
- **Maps / Routing** : MapLibre GL, OSRM Routing API, Google Maps Places API
- **DevOps / Deployment** : Docker, Docker Compose, Railway, Vercel, GitHub Actions, GHCR
- **Tools** : Postman, Figma, Sanity CMS, Graphify, LM Studio, TablePlus, VS Code
- **Version Control** : Git, GitHub, GitLab, Azure DevOps
- **OS** : Windows, macOS, Linux, WSL
- **Testing / QA** : Playwright, Vitest, API Testing, ESLint, Feature QA Tracker, Bug Tracker

Education

Harvard University (CS50x: Introduction to Computer Science) – Online	2024 - 2026
- Completed Harvard's CS50x course covering foundational topics in computer science, including algorithms, data structures, memory, abstraction, web development, and programming in C, Python, SQL, HTML, CSS, and JavaScript. - Gained hands-on experience through problem sets and final projects focusing on computational thinking and software engineering fundamentals.	
Industrial Training Institute, Kuala Langat – Malaysia	2022 - 2024
Diploma in Web Development, GPA: 3.71/4.00	
- WorldSkills Malaysia Belia (WSMB) – 2022 & 2023 - Malaysia Tech Lympics (TOP 10) - 2023	
SMK Banting (SPM) – Malaysia	2016 - 2022
- Computer science - B - Science - A	

Speech

- Malay** : Fluent
- English** : Moderate
